

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A method of independent process control comprising the steps of:
- providing an automated production process control program on a network server;
 - deploying a plurality of parallel instances of the control program to a respective plurality of thin client terminals over a network; and
 - independently controlling a process from each of the plurality of thin terminals, thereby providing multiple terminal server-client operation.

2. (original): The method of claim 1 wherein the step of deploying comprises using an intermediate software layer for creating the plurality of instances of the control program.

3. (canceled).

4. (original): The method of claim 1 wherein the plurality of the clients utilize at least one of a plurality of different operating systems.

5. (currently amended): The method of claim 54 wherein the plurality of different operating systems comprise Windows, Linux, Unix and Macintosh operating systems.

6. (original): The method of claim 1 wherein at least one of the plurality of client terminals is a flying client having a wireless connection to the network.
